

# LARGE or BULK

Record serial number and model numbers if present. Record the tire's manufacturer model, type, and size. Large items will not normally fit in standard size packaging.

Affix tag with clear tape, plastic tie, or string. If necessary to preserve prints or trace evidence, use sterile plastic or cloth material to cover or enclose item.

## SDFL STORAGE

- Large items may be stored in police garage, if necessary, due to space constraints in the evidence room.
- Special arrangements may be necessary for abnormally large items of critical importance.

## Tires

- Don't use plastic covering when the tire contains blood or moist evidence.
- If tread pattern and wear is relevant, take photographs with scale and tread lifts. Protect tire from additional cuts or marks to tread.
- Tread depth should be measured with a tire depth gauge, if needed.

## Motor Vehicles:

- Vehicles requiring processing for evidence should be sealed with evidence tape and transported in an enclosed trailer. This is to prevent loss or destruction of evidence.
- Always check wanted or stolen status of vehicle in police custody.
- All vehicles in police custody should be inventoried for valuables before leaving the scene.
- Seal with evidence tape.
